Maringá, Paraná, Brazil • +55 44 9970 0617 • jordaoqualho@gmail.com • jordaoqualho.com

SUMMARY

Senior Software Engineer with 6+ years of experience building and operating production systems with Node.js, TypeScript, React, and cloud platforms. Full-stack background with strong backend experience across REST APIs, microservices, asynchronous workflows, SQL/NoSQL databases, caching, and AWS/GCP environments. Experienced in production troubleshooting, incident investigation, performance optimization, high-concurrency systems, automated testing, and technical leadership. Comfortable owning features from implementation through production support.

WORK EXPERIENCE

Senior Backend Engineer (Contract / B2B) | Afinz

Dec 2023 – Aug 2026

- Worked on high-volume financial services within the Sem Parar ecosystem, supporting a platform serving 7M+ active users.
- Acted as the technical reference for Sem Parar production support, coordinating critical incident investigation and mentoring another developer.
- Investigated production issues and troubleshoot asynchronous workflows (AWS SQS) across Node.js/TypeScript microservices, including manual message reprocessing during critical incidents.
- Maintained GitHub Actions deployment workflows and improved technical documentation and onboarding materials for the team.

Technologies: Node.js, TypeScript, AWS, CloudWatch, DynamoDB, PostgreSQL, MySQL, SQS, GitHub Actions, Microservices, Jest

Senior Full Stack Engineer (Advisory / B2B) | Sully (US)

Mar 2026 – Apr 2026

- Built React micro-frontends for an AI-assisted healthcare workflow platform in collaboration with US-based stakeholders.
- Built a reusable React component system with Storybook and Atomic Design patterns inside a monorepo.
- Integrated frontend flows with healthcare data exposed by the backend, including FHIR-related structures and workflows.
- Adapted existing ArgoCD manifests and deployment patterns from the monorepo for the new application components.

Technologies: React, TypeScript, NestJS, Storybook, Micro Frontends, ArgoCD

Senior Full Stack Engineer | ROIT GROUP S.A.

Jul 2023 – Nov 2023

- Developed features across React micro-frontends and NestJS microservices for an AI-driven accounting automation platform.
- Designed and implemented Redis caching and invalidation strategies for high-traffic analytical flows.
- Maintained automated tests with Jest across backend services, contributing to 85%+ coverage in core areas.

Technologies: React, TypeScript, NestJS, Redis, Micro Frontends, Microservices, Jest, GitHub Actions

Senior Full Stack Engineer | Voyager Portal

Nov 2022 – Jun 2023

- Migrated a legacy reporting service from Python to TypeScript, reducing memory consumption and eliminating runtime failures.
- Built complex, stateful Vue.js components for global maritime logistics workflows, using Vuex for state management.
- Worked across frontend and backend application logic with a focus on low-latency rendering and maintainable TypeScript services.

Technologies: Vue.js, Vuex, TypeScript, Node.js

Full Stack Engineer | Grupo Soma

Nov 2021 – Nov 2022

- Scaled Node.js backend services and optimized GCP Cloud Run infrastructure to support live-commerce events with 12,000+ concurrent active users and zero downtime.
- Worked full stack with a frontend-heavy focus using React, Redux Toolkit, Node.js, and Express.js, plus AWS Lambda and API Gateway.
- Took on technical leadership responsibilities during the second half of the engagement, mentoring engineers and onboarding the next technical lead before handoff.

Technologies: React, Redux Toolkit, Node.js, Express.js, GCP, Cloud Run, AWS Lambda, API Gateway, Jest

Full Stack Engineer | Cria Studio

Aug 2021 – Nov 2021

- Built an interactive 2D React application as the primary engineer, supporting real-time architectural visual updates and image overlays.
- Developed the backend using Node.js and Express.js, creating REST APIs required by the frontend.
- Owned technical and product decisions required to take the project from concept to production under a short delivery timeline.

Technologies: React, Node.js, Express.js, REST APIs, AWS S3

Full Stack Engineer | Lorena Felicio

Jan 2020 – Aug 2021

- Built an ERP management system from scratch using React, Node.js, Express.js, MongoDB, and AWS S3.
- Designed and implemented REST APIs, controllers, services, JWT authentication, and MongoDB schemas used throughout the project lifecycle.
- Built the frontend in React using hooks, Context API, and Redux Toolkit for state management.
- Integrated Brazilian government tax and invoicing APIs, including XML validation and authentication requirements.

Technologies: React, Redux Toolkit, Node.js, Express.js, MongoDB, AWS S3, REST APIs, JWT, Jest

ADDITIONAL INFORMATION

Backend: Node.js, TypeScript, Express.js, NestJS, REST APIs, Microservices

Frontend: React, Redux Toolkit, Vue.js, Micro Frontends, Storybook

Data: MongoDB, Redis, DynamoDB, PostgreSQL, MySQL

Cloud: AWS (CloudWatch, S3, DynamoDB, SQS), GCP / Cloud Run, GitHub Actions, ArgoCD

Engineering: Production Troubleshooting, Incident Investigation, Distributed Systems, Caching Strategies, Performance Optimization, Automated Testing, Technical Leadership

Recent Project Experience: Next.js, Tailwind CSS, Docker

Languages:

- Portuguese (Native)
- English (C1 Advanced)
